

#### Vision / Website Introduction:

- Continuing from my previous assignment, I wanted to focus on raising awareness for the environment. My new website "EcoRestore", zeroes in on protecting rainforests. Rainforests are considered to be Earth's lungs, housing many different ecosystems. However, rainforests are diminishing due to deforestation and climate shifts. "EcoRestore" aims to inform, inspire, and unite people to protect these precious ecosystems.

#### Works Cited:

- <https://www.wwf.org.uk/updates/meet-protectors-amazon>
- This website is about protecting the Amazon rainforest which is close to my theme. It uses bright and high resolution images that engage the viewer.
- Transition & Structure: The website uses a column drop towards the bottom of the web page, which provides a clear and structured flow of information. This influenced my decision to organize content in columns, making sure that the content realigns for optimal user experience.

#### Explaining Transition:

- For my website, I used the column drop transition. I used this approach because it allows multi-column content, especially for the images in the body section to adapt across multiple devices. On wider screens, like desktops, the content is horizontally aligned for a panoramic view. As screen size narrows, such as on tablet or mobile, the columns stack vertically, prioritizing readability and content hierarchy. This ensures that viewers can easily navigate and understand our message, regardless of their device.

#### Font Choice:

- I used a thicker version of the Assistant font that grabs the user's attention and the thinner Roboto font to ensure longer text in the body section was readable. This combination made sure the website was readable and created a straightforward layout.

#### Color Choice:

- I used bold and vibrant colors such as green to match the color palette of the images used in my website. I also focused on using green as it matches the theme and color of rainforests.
